

HOW TO MAKE YOUR JOINT VENTURE PROJECTS SIMPLE

For Joint Venture projects, it's important to have a software that can keep up and process the mass amounts of data it needs to daily. The management of projects this size is no easy task. Job costs and budgets, progress reporting, overseeing subcontractors, field crews and schedules, materials and equipment, and constantly moving timelines are just a few of the things to keep track of.

An easy project-wide adoption and deployment of the software is crucial, as well as integration and government compliance. At Austin Lane, we understand the issues that can occur on projects of this scale. That's why we built ALMobile to scale to your business needs for Joint Venture projects.

Organizations put their trust in ALMobile for all of their Joint Venture projects because it works. With ALMobile, companies mitigate risk with our government-compliant software that mobilizes your workforce and makes processing payroll for all Joint Venture partner organizations timely, accurate, and efficient.

Experience a mobile software that can:

- Consolidate all data into one database
- Ability to lease ALMobile for the length of the contract
- Host data in the cloud
- Meet government technology requirements
- Access data without an internet connection
- Process everyone's payroll in as little as one day
- Empower your field workforce with simple to use applications

A successful joint venture is one where parties share and understand the vision of the project. Collaboration, especially with a software solution, is needed to build a solid relationship and manage resources. For a joint venture arrangement to be successful, trust, communication, and a reliable software like ALMobile are key. This will make your Joint Venture project simple.

Need software that can handle the work load of your next Joint Venture project? Reach out to our ALMobile Sales team at sales@austinlane.com to see how our software can take the complexity out of Joint Ventures.
