AUSTIN LANE TECHNOLOGIES, INC. CELEBRATES 20 YEARS

Denton, TX – February 13, 2019 – This year, Austin Lane Technologies, Inc. celebrates their 20th anniversary. Founded in 1999 the co-founders, Austin Beaty and Rob Graber, sketched out their software, ALMobile, on a dinner napkin. Since then, the software has transformed the mobile technology industry. In 2001, they released the first version of ALMobile on Palm handheld devices. Today in 2019, ALMobile 11 runs on all platforms and all mobile devices. The company has thousands of ALMobile users across North America and continues its rapid growth in the global market.

Austin Lane's initial goal is to enhance business processes using the latest emerging technologies to provide the best quality product in the industry. From the beginning, ALMobile business applications have enabled organizations to streamline processes, remotely capture and transfer real-time data digitally, and eliminating the use of paper. The needs of clients and the market are at the forefront, as their team of developers continue to create new, innovative features and functionalities. With powerful applications like ALMobile's Time, Attendance, and Production Tracking, capturing jobsite intelligence remotely for labor, equipment, and resources has never been easier. ALMobile allows organizations to quickly manage payroll, and obtain real time productivity reporting at the press of a button.

"We have always strived to provide the absolute best product and services for our clients," said Beaty, "We partner with our clients to help them achieve their goals."

Due to the high demand in the North Texas market, Austin Lane also created an IT Services Division in 2000. The Austin Lane Managed IT Services Division leverages the latest technologies to ensure clients' networks are secure, stable, and designed to provide peace of mind. Advanced technologies are utilized to remotely monitor networks, diagnose concerns, and resolve issues, saving clients time and money.

About Austin Lane Technologies, Inc.
